114c: Cyber Defense Analyst - Incident Handling Methodology

Introduction

Scenario

Welcome to the CYBRScore Cyber Defense Analyst Incident Handling Methodology Assessment.

This assessment is one of five and is focused specifically on items related to incident handling.

You are assuming the role of a cyber defense analyst at a company named Proceps. Your task will be presented to you in the information pane at the bottom of your browser window. You can move forward by clicking the Done button in the bottom right-hand corner, and you can move backward by clicking the Arrow buttons in the bottom left-hand corner.

To switch the active machine, use the Resources tab in the top right-hand corner. This tab will also give you information such as operating systems and passwords, and will allow you to send CTRL-Alt-Delete commands to a machine.

This assessment is specifically designed to test the knowledge, skills, and abilities (KSAs) required in the Cyber Defense Analyst job role as defined by the NIST Cybersecurity Framework (CSF).

Student Information

Name: Mr. Anonymous
Email: anonymous@proceps.com
Organization: Cybrscore

This Assessment

Work Date: Cyber Defense Analyst
Assessment Identifier: 10068542

Training recommendations

To improve your score on this assessment, try one of these courses or labs:

Course	Lab	Description
• PEN-001	Identifying System Vulnerabilities with OpenVAS	Students will scan a system in OpenVAS (Open Vulnerability Assessment) to discover and identify systems on the network that have vulnerabilities. Provides an overview of core system administrator security concepts in both the Windows and Linux environment. Topics include: Least-Privilege, Indicators of Attack/Compromise, Perimeter Defense, Network Segmentation, and more.
• NET-400	System Administration	In this first lab we will attempt to exercise all the relevant skills found in this domain. We are focusing on responding to incidents and the skills needed to address these sorts of problems at the "Practitioner" level.
• PRI00-1L	Comprehensive Threat Response	Students will run a Core Impact or Nessus Scan and identify vulnerabilities. Students will then view the report and practice vulnerabilities according to risk.
• PRI00-4L	Vulnerability Scan Analysis	Students will use OpenVAS to do a vulnerability analysis and KPI will be recommended KPIs in PRI-001, etc.
• PRI00-2L	Detecting Recommendations Based on Vulnerability
